

ARTIFACT SHEET

Enter artifact number below. Artifact number is application number + artifact type code (see list below) + sequential letter (A, B, C ...). The first artifact folder for an artifact type receives the letter A, the second B, etc..
Examples: 59123456PA, 59123456PB, 59123456ZA, 59123456ZB

10/034046 ZA

Indicate quantity of a single type of artifact received but not scanned. Create individual artifact folder/box and artifact number for each Artifact Type.

The Commissioner of
Patents and Trademarks

Has received an application for a patent for a new and useful invention. The title and description of the invention are enclosed. The requirements of law have been complied with, and it has been determined that a patent on the invention shall be granted under the law.

Therefore, this

United States Patent

Grants to the person(s) having title to this patent the right to exclude others from making, using, offering for sale, or selling the invention throughout the United States of America or importing the invention into the United States of America for the term set forth below, subject to the payment of maintenance fees as provided by law.

If this application was filed prior to June 8, 1995, the term of this patent is the longer of seventeen years from the date of grant of this patent or twenty years from the earliest effective U.S. filing date of the application, subject to any statutory extension.

If this application was filed on or after June 8, 1995, the term of this patent is twenty years from the U.S. filing date, subject to any statutory extension. If the application contains a specific reference to an earlier filed application or applications under 35 U.S.C. 120, 121 or 365(c), the term of the patent is twenty years from the date on which the earliest application was filed, subject to any statutory extension.

[57] **ABSTRACT**

An odor desensitizing intra-nasal clip for dental patients includes a bendable arcuate band extending between distal ends. The ends have odor-emitting pads affixed thereon. The band has an inner surface coextensive with the band, wherein the inner surface contacts the respective right and left sides of a user's nasal septum when the outer distal ends are inserted into a user's right and left nostrils, with the band wrapped around the lower distal end of the nasal septum. Preferably, the band has a pair of reverse curvatures near its outer distal ends, so that the reverse curvatures separate the ends from contact with the surface of the user's nasal septum. To mask dental odors during dental procedures, the intra-nasal clip has odor-emitting absorbent pads attached to its distal ends; with odorant absorbed therein.
